

# AXIS Camera Station Integrator Suite.

Surveillance design,  
installation and  
management  
made simple.

Today's customers want simple, reliable and complete security solutions that are easy to install and maintain. Now, with AXIS Camera Station video management software, you can meet customer's expectations and perform each installation more efficiently.

## What is AXIS Camera Station?

AXIS Camera Station is a video management system that's ideal for installations such as schools and manufacturing sites. It gives customers complete control over their whole surveillance and security system, helping them to handle incidents effectively and export high-definition evidence, quickly.

Depending on your customers' needs, they can also add features to help them communicate with visitors, secure entrances and exits, handle deliveries and even enhance system performance through analytics. AXIS Camera Station makes it all possible.

### Individual and reliable

You can build the system based on standard PCs and servers. Or, to make it even easier, you can choose an out-of-the-box recorder as a base to build a complete end-to-end solution - all tested and with Axis quality and exceptional support.

# What is AXIS Camera Station Integrator Suite?

The all-in-one toolkit will help you complete processes faster, build long-lasting customer relationships and even generate new sources of income by offering value-added services and additional system capabilities. AXIS Camera Station Integrator Suite is the smart, simple way to manage your customers' AXIS Camera Station installations at every step, from design through to installation – and beyond.

## 1 Effective design & selling

With AXIS Site Designer on your laptop or tablet, you can manage the whole design process effectively. You can make instant changes, use video resolution examples to select the right cameras, add camera names and retention times. You can even enter customer specific instructions for the installer

## 2 Quick installation

Save valuable time and minimize costly mistakes by automatically importing all configurations directly from AXIS Site Designer to AXIS Camera Station.

## 3 Smooth deployment

Take testing out of the office and into the real world. Perform on-site system verifications and ensure everything is working properly, with AXIS Installation Verifier.

## 4 Useful documentation

Once you've run your tests, get an automatically-generated post-sales report. It can help with training, trouble-shooting, future installations and system status follow-ups.

## 5 Simple maintenance

Log in to AXIS Camera Station System Health Monitoring to check all end-customer installations and get status updates on individual cameras and servers.
