How can Trend Micro XDR solve your detection and response challenges?

The Problem

Data breaches are on the rise, and threats are stealthier than ever. It only takes one threat to get through to be 100% at risk.

- Accenture

- ESG

- Imperva

- Verizon

Slow and inadequate response increases the impact of the attack.

The Solution

AI and expert analytics

Correlation and analytics across security layers means fewer, higher fidelity alerts and faster, earlier detection – with it, you can combat threat overload.

- More than 55% of all security professionals receive over 10,000 security alerts on a daily basis.

XDR connects events across email, endpoint, server, cloud workloads that seem benign on their own – but represent a meaningful indicator of compromise.

- Beyond the endpoint 94% of malware infections come from email, which is the #1 cyberattack source.

Single console with one source of prioritized alerts, supported by visualization and guided investigation, to help you “connect the dots”.

- Component Visibility

- Managed XDR offers 24x7 alert monitoring and investigation, remediation and response – backed by the resources and expertise of a team of Trend Micro security experts.

Managed XDR can help you
