

## WE'RE NOT JUST FIREWALLS.

SonicWall automated, real-time breach detection and prevention layers proven cybersecurity across your entire organization.

You know SonicWall because of our rich history designing high-performance firewalls. But like your organization, SonicWall has evolved.

Today, the modern SonicWall Capture Cloud Platform delivers automated, real-time breach detection and prevention to safeguard your business or organization.

With this layered approach, you can stop the most malicious cyberattacks, including ransomware and encrypted threats, from compromising your network and damaging your brand.

Physical & Virtual  
Firewalls

## THE CAPTURE CLOUD PLATFORM

The SonicWall Capture Cloud Platform underpins our complete portfolio of high-performance hardware, virtual appliances and clients to harness the power of the cloud.

The platform combines the global security intelligence of the Capture Threat Network with the cloud-based management, reporting and analytics of the Capture Security Center and the real-time attack prevention of the multi-engine Capture Advanced Threat Protection (ATP) sandbox.

### SONICWALL® CAPTURE CLOUD PLATFORM

CAPTURE ATP • SSL DPI • ANTI-MALWARE • IPS • CLOUD APPLICATION SECURITY • ANTI-PHISHING • URL FILTERING

THREAT PREVENTION

MANAGEMENT

REPORTING / ANALYTICS

Real-time email security.  
Powered by the cloud.

Protect your organization from email-borne threats such as ransomware, zero-day threats, spear-phishing and business email compromise (BEC) — all via affordable, predictable and flexible monthly or annual subscription options.

Available integration with the SonicWall Capture Advance Threat Protection (ATP) sandbox service lets you dynamically scan all suspicious email attachments and URLs, and block dangerous files or URLs before they reach your network. It even delivers advanced threat protection for Office 365 and G Suite services.

Defend your endpoints.  
Automatically.

With a next-generation malware protection engine powered by SentinelOne, Capture Client applies advanced threat protection techniques, such as machine learning, network sandbox integration and system rollback, to ensure your endpoints aren't compromised by today's most malicious malware, including ransomware.

After stopping attacks, Capture Client can quickly roll back modifications and auto-immunize your endpoints — all with a single click. Easily return to a previous 'healthy state' and get your employees back to productivity.
